

Major Work in Your Area

Overnight and Saturday Construction at the Southeast Treatment Plant

Construction on the Biosolids Digester Facilities Project the Southeast Treatment Plant is making steady progress. Having completed mass excavation, the project has moved onto construction of the foundations. **Five large concrete pours will take place on Saturdays from April 23 through June 18, weather permitting. This work will begin in the morning as early as 2:00 am and continue into the afternoon on April 23, May 7, May 21, June 4, and June 18.**

The project teams will work to minimize disruptions to the neighborhood. While the contractors are required to abide by the City's noise and vibration ordinances, expect some noise from trucks and heavy equipment. Expect additional vehicles and crews in the area, and occasional inconveniences due to construction activities. Businesses and residents will maintain access to their properties, although there may be temporary delays. Night lighting will be controlled, facing downward, or shielded to contain the light on-site. No interruption in sewer service is expected during construction.
