## 30-DAY PUBLIC NOTICE

DATE: July 29<sup>th</sup>, 2022

CONTRACT No. WD-2843: 16-, 12-, and 8-Inch Ductile Iron Water Main Replacement on Diamond St from 27<sup>th</sup> to Diamond Hts Blvd, 28<sup>th</sup> and Duncan Streets from Douglas to Noe Streets, Valley St from Diamond to Noe Streets, and Noe St from Duncan to Valley Streets, Portola Drive from 200 feet west of Clipper Street to 200 feet east of Clipper Street, Clipper Street from Portola Drive to Diamond Hts Blvd, Diamond Hts Blvd from Clipper Street to Duncan Street.

WHAT: San Francisco Public Utilities Commission (SFPUC) has contracted M Squared Construction, Inc. to install new water mains in your neighborhood as part of the above referenced contract. This project will replace pipes that are approaching the end of their useful life.

### WHAT TO EXPECT DURING CONSTRUCTION:

Water main installation work involves some street excavation in front of your property. This work may create noise, vibration, dust, and parking/ traffic impacts in the work zone.

Traffic control and “No Parking/Tow Away” signs will be posted when we are getting ready to begin work on your block. Local access for residents, deliveries, and emergency services will be provided at all times during work hours. We request that you assist us by limiting your use of the roadways within the construction work areas during working hours for the safety of the public and our employees, and to park in driveways or on adjacent blocks when No Parking zones are posted. Should you need access to your property/driveway during work hours, please alert a crew member on site and note that there may be some slight delay to enter or exit your property/driveway to allow for crews to create a safe path of travel. Please follow instructions from crew members and follow all posted detour signs.

This project covers roughly twenty different City blocks in your neighborhood, meaning work will not be happening on your block for the entire project duration. Water main installation is done in phases, so there may also be periods of inactivity during the work dates.

Main install for each segment should last about 4-8 weeks depending on segment length and site conditions. There will be a brief break in work after main install while the Water Department perform the required tests and inspections (approximately 4 weeks). We will then come back to perform service change overs, connecting each property’s water service to the new main (3-6 weeks). After service change overs, there will be some less impactful connection work, connecting the new main to the old main at each segment end point. Final stage is concrete trench restoration followed by pavement restoration (ie. grinding and paving).

There will be a short interruption of water service when SF Water Department crews are making service connections to the new main. *Advance notice will be given.*

Although some inconvenience due to construction activity may be possible, we are committed to doing what we can to minimize impacts as we work to complete these necessary utility infrastructure upgrades.

WHEN: The anticipated start date for this project is August 29<sup>th</sup>, 2022 with completion anticipated May 17<sup>th</sup>, 2024.

WORKDAYS & HOURS: Monday – Friday: 8:00 a.m. to 5:00 p.m.
